

Seamus English

FRONT END DEVELOPER

SUMMARY

I am currently a student enrolled in Hunter College, where I plan to receive my Bachelors Degree in Computer Science with a minor in Mathematics. Every day, I spend hours learning how to become a better developer. Programming is something I am very passionate about because of the unlimited possibilities of applications that can be created. In addition, it seems every few weeks a new form of technology comes out that changes the way programs could be made, meaning I can strengthen my skills even further. As a software developer, my goal is to come up with ways to use the latest and greatest technologies. I always strive to create things that are practical and useful, and I work hard every day to come up with new ways to improve and create the future.
